# Subject index

Numbers refer to the page where a definition or an explanation of, and/or a *figure* or a **table** on a given subject is found.

Entries are repeated, represented by the ~ sign, in lower level sub-entries only where it facilitates understanding.

- 10 Å phase 332
- 2<sup>nd</sup> critical endpoint *see* critical endpoint
- 3D *see* three-dimensional
  
- $\alpha$ -PbO<sub>2</sub> structure 200
- $\beta$ -cristobalite 196, 197
- $\delta^{18}\text{O}$  *see* isotope
  
- Adula–Cima Lunga unit 443
  - Eocene HP metamorphism 444
  - garnet lherzolites 443
- advection-driven weakening of the crust 428
- affinity of the protoliths of HP–UHP rocks 384
- age of UHPM
  - ~ in the BIU 34
  - ~ in the Bohemian Massif 153
  - ~ in the LCU 44
  - ~ in the WGR 65–66
  - ~ in the Kokchetav Massif 94–97
  - depleted mantle-based model ~ for Dabie Shan–Sulu granitic gneisses 403, 404
- akimotoite 201
- Al-in-orthopyroxene geobarometry 244–245
  - effect of Fe<sup>3+</sup> on ~ 245
- amphibole
  - ~ stability in hydrous peridotites 331
  - breakdown of ~ at HP 332
  - Nd concentrations in ~ 374
  - Sm concentrations in ~ 374
  - stability of K~ 335
- aragonite structure 199
  
- baker transformation 431
- Barchi *see* Kokchetav Massif, Unit I
- bcc* *see* body-centred cubic packing
- beaerthite
  - stability 217
  - structure 217–218
- binary system, solid + H<sub>2</sub>O 316
- biotite
  - coronitic texture around ~ 283, **284**, 285
- BIU *see* Brossasco–Isasca Unit
- Bixiling complex 119
  - geological map 118
  - P–T* conditions 120
  - isochron ages 378–379
- Blåhø Nappe 421
- blocking temperature 342–343, 379, 381
- body-centred cubic packing (*bcc*) 191, 193
- Bohemian Massif
  - eclogites
    - metamorphic age 153
    - pressure and temperature estimates 152–156
    - protoliths 156
  - exhumation path of UHP units 161
  - garnet-bearing ultrabasites, minerals and textures 160
  - geological setting 145–148, 149
  - geodynamic model 172, 174, 175, 176–177
  - P–T* estimates of garnet peridotites 159, 161, 162–163
  - quartzofeldspathic rocks 159–163
  - UHPM in the ~ 145–148, 151–163, 172–177
- boromuscovite 210
- Brossasco–Isasca Unit (BIU) 13–16, 17, 18–35
  - age of UHPM 34, 35, 344–348
  - geological map 17
  - lithostratigraphic complexes 16, 17, 18–31
  - metamorphic evolution of Variscan paraschists from the PC **19**
  - metamorphic evolution of dolomite-rich marble from the PC **20**
  - metamorphic evolution of metagranodiorite from the BIU 288–289
  - Monometamorphic Complex (MC) 23–31
  - peak *P–T* conditions 31
  - Polymetamorphic Complex (PC) 16–23
  - P–T–t* path 31–32, 33, 35, 347–348, 349
  - superzoned garnet from the BIU whiteschists 32
- buoyancy
  - factors affecting ~ 415
  - force balance of ~-generated body forces and viscous drag forces 415
- buoyant crustal material
  - descent phase of ~ 417
  - exhumation phase of ~ 417

- Ca-in-orthopyroxene geothermometry 240–241  
 calcite-anorthite reaction 263–264, 265  
 ~ products 263, 264  
 cycle of diffusion controlled reactions in the ~ 269, 270  
 calcite structure 199  
 calderite 203  
 CaO–Al<sub>2</sub>O<sub>3</sub>–SiO<sub>2</sub>–H<sub>2</sub>O–CO<sub>2</sub> system 312, 313  
 cathodoluminescence imaging (CL)
